

# PHASE 3 – PROJECT DESIGN

## Problem – Solution Fit

*Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer*

| Field         | Details                                                                           |
|---------------|-----------------------------------------------------------------------------------|
| Team ID       | 6ab4c536b5170a9b58b4c6e7                                                          |
| Project Name  | Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer |
| Maximum Marks | 4 Marks                                                                           |

### 1. Problem–Solution Fit

The problem–solution fit connects the identified procurement problem with the proposed ServiceNow automation. The source project identifies delays, manual overhead and possible oversight during configuration of Standard Laptop requests.

| Identified Problem                              | Proposed Solution                                           | Expected Effect                           |
|-------------------------------------------------|-------------------------------------------------------------|-------------------------------------------|
| Manual handling of Standard Laptop orders       | Use ServiceNow Flow Designer to automate the workflow       | Less manual intervention                  |
| Configuration step may be overlooked or delayed | Automatically create a Catalog Task after approval          | More consistent task initiation           |
| Task assignment requires manual handling        | Assign the Catalog Task to Hardware                         | Clear task ownership                      |
| Users may wait for configuration                | Start Hardware fulfilment task automatically after approval | Reduced waiting caused by manual hand-off |
| Inefficient resource allocation                 | Route the task directly to Hardware                         | Improved task allocation                  |

### 2. Core Need and Fit

| Design Aspect     | Project Definition                                                       |
|-------------------|--------------------------------------------------------------------------|
| User Behavior     | Requester submits the request and waits for approval and fulfilment.     |
| Core Need         | Reliable transition from approved request to Hardware task.              |
| Proposed Behavior | Approval leads to automated Flow execution.                              |
| Solution Fit      | Flow Designer connects request to task creation and Hardware assignment. |
| Expected Benefit  | Less manual intervention and reduced waiting caused by the hand-off.     |

### 3. Fit Assessment

The proposed automation directly targets the configuration-task hand-off rather than changing the underlying Standard Laptop request or procurement policy. This keeps the solution aligned with the stated project objective and implementation scope.
