

PHASE 3 – PROJECT DESIGN

Proposed Solution

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Field	Details
Team ID	6ab4c536b5170a9b58b4c6e7
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

1. Proposed Solution

The proposed solution is a ServiceNow Flow Designer automation for Standard Laptop orders. The Standard Laptop item remains available through Service Catalog. When the request reaches the required Approved condition, the Standard Laptop Task Flow creates a Catalog Task using the Requested Item Record and assigns the task to the Hardware group.

2. Proposed Workflow

1. Employee selects Standard Laptop from Service Catalog under Hardware.
2. Employee places the request using Order Now.
3. The request proceeds through the approval process.
4. For an approved Standard Laptop request, the configured Standard Laptop Task Flow creates the Catalog Task.
5. Flow Designer executes the Create Catalog Task action.
6. The Requested Item Record is used as the request item.
7. The task receives short description and description “Laptop need to Configured”.
8. The Assignment Group is set to Hardware.
9. The Hardware team opens the Catalog Task and performs laptop configuration.

3. Main Flow Configuration

Configuration	Value
Flow Name	Standard laptop task / Standard Laptop Task
Application	Global
Run As	System User
Trigger	Service Catalog
Action	Create Catalog Task
Request Item	Requested Item Record
Short Description	Laptop need to Configured
Description	Laptop need to Configured
Assignment Group	Hardware
Approval	Approved

4. Solution Features

- Automated task creation for an approved request.

- Automatic Hardware assignment.
- Standardized task description.
- Traceability from Request → Requested Item → Catalog Task.
- Reusable Flow Designer pattern for future standard IT equipment requests.

5. Novelty / Uniqueness

The project uses a visual ServiceNow workflow to connect an approved catalog request directly to a fulfillment task, reducing the need for manual task creation and assignment.
