

PHASE 6 – PROJECT DOCUMENTATION

Functional Specification Document (FSD)

Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Field	Details
Team ID	6ab4c536b5170a9b58b4c6e7
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

FSD-1. INTRODUCTION

Project Title: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Platform: ServiceNow

Project Type: NM1051 ServiceNow Administrator workflow automation

FSD-2. PROJECT OVERVIEW

The project automates the fulfilment hand-off for Standard Laptop requests. A user submits the Standard Laptop catalog item, the request proceeds through approval, and the configured Flow creates a Catalog Task for the Hardware group.

Purpose and Objectives

- Reduce manual intervention in Standard Laptop procurement.
- Create configuration tasks consistently for approved requests.
- Route configuration work to Hardware.
- Improve traceability between request, approval, Requested Item and Catalog Task.

Key Features

- Standard Laptop Service Catalog item under Hardware.
- Service Catalog trigger.
- System User Flow execution.
- Create Catalog Task action.
- Requested Item Record mapping.
- Configured description fields.
- Hardware assignment.
- Approved condition.

FSD-3. ARCHITECTURE

Solution Architecture - Automated Standard Laptop Procurement

Core automation: Approved Service Catalog request → Flow Designer → Create Catalog Task → Hardware assignment

ServiceNow Solution Architecture

Architecture sequence: User → Service Catalog → Approval → Flow Designer → Requested Item Record → Catalog Task → Hardware.

Configuration note: The supplied project implementation uses Service Catalog as the Flow trigger and sets Approval = Approved in the Create Catalog Task action. The report therefore describes approval as part of the intended business sequence and does not label the trigger itself as an approval trigger.

FSD-4. SETUP INSTRUCTIONS

1. Open the ServiceNow project/training instance.
2. Navigate to Flow Designer through All → Process Automation → Flow Designer.
3. Create the Flow and configure the properties.
4. Add the Service Catalog trigger.
5. Add the Create Catalog Task action and configure required fields.
6. Save and activate the Flow.
7. Open Maintain Items and associate the Flow with Standard Laptop under Process Engine.

FSD-5. CONFIGURATION STRUCTURE

Configuration Item	Value
Flow Name	Standard laptop task / Standard Laptop Task
Application	Global
Run As	System User
Trigger	Service Catalog
Action	Create Catalog Task
Request Item	Requested Item Record
Short Description	Laptop need to Configured
Description	Laptop need to Configured
Assignment Group	Hardware
Approval	Approved

FSD-6. RUNNING THE WORKFLOW

8. Open Service Catalog.
9. Select Hardware.
10. Open Standard Laptop.
11. Click Order Now.
12. Open the Request Number.
13. Open Approvers and approve the request when required.
14. Open Requested Item.
15. Scroll to Catalog Tasks.
16. Open the generated task and verify description and Hardware assignment.

FSD-7. AUTOMATION / WORKFLOW RULES

Rule ID	Automation Rule
BR-01	Standard Laptop must use the configured Service Catalog process.
BR-02	The Flow is intended to process the approved request and create the configuration task.
BR-03	The generated Catalog Task is routed to Hardware.
BR-04	The task description identifies the laptop configuration activity.
BR-05	Remaining action fields use ServiceNow defaults unless explicitly configured.

FSD-8. DATA / FIELD SPECIFICATION

Object / Field	Specification
Catalog Item	Standard Laptop under Hardware
Trigger	Service Catalog
Run As	System User
Request Item	Requested Item Record
Task Table	Catalog Task
Short Description	Laptop need to Configured
Description	Laptop need to Configured
Assignment Group	Hardware
Approval	Approved

FSD-9. AUTHENTICATION & AUTHORIZATION

The workflow is configured to run as System User. Actual interactive access to ServiceNow depends on the roles and permissions assigned in the project/training instance. The project team should record the actual role used for administration/testing if required by the institution.

FSD-10. USER INTERFACE

The primary user interface is Service Catalog → Hardware → Standard Laptop → Order Now, followed by request status, approval, Requested Item and Catalog Task views.

UAT EVIDENCE 2 – Request / approval

Request - REQ0010001

Approved Task: REQ0010001

Number: REQ0010001

Requested for: System Administrator

Location:

Due date: 2026-10-02 08:33:02

Price: \$1,100.00

Description:

UAT EVIDENCE 3– Catalog Task details

The screenshot displays the ServiceNow interface for a Catalog Task. The task number is SCTASK0010001. The task is in the 'Open' state with a priority of '4 - Low'. The description is 'Laptop need to Configured'. The task is assigned to 'System Administrator'. The activities section shows a table with the following data:

Impact	Opened by	Priority	State
3 - Low	[Empty]	4 - Low	Open

FSD-11. TESTING AND ACCEPTANCE

Acceptance ID	Acceptance Criteria	Evidence
AC-01	A Standard Laptop request can be submitted through Service Catalog.	Actual screenshot / request number
AC-02	The request reaches the approval stage.	Approver screenshot
AC-03	For an approved request, the Standard Laptop Task Flow executes as configured.	Flow execution evidence
AC-04	A Catalog Task is created from Requested Item Record.	Requested Item / Catalog Task screenshot
AC-05	Task contains "Laptop need to Configured".	Catalog Task screenshot
AC-06	Task is assigned to Hardware.	Catalog Task screenshot
AC-07	Catalog Task is visible from Requested Item.	Requested Item screenshot

FSD-12. ERROR AND EXCEPTION HANDLING

- If the Flow is inactive or not associated with Standard Laptop, verify Flow status and Process Engine configuration.
- If approval is not satisfied, task creation should not be treated as a successful fulfilment event.
- If Hardware assignment is missing or incorrect, review the Create Catalog Task action configuration.

- If the task is not visible under Requested Item, inspect Flow execution and action mapping.
- If the ServiceNow instance or required records are unavailable, record the environment issue in the UAT defect/open-issue section.

FSD-13. NON-FUNCTIONAL REQUIREMENTS

NFR	Requirement
Usability	Request process should be straightforward.
Reliability	Approved requests should consistently create the intended task.
Maintainability	Flow should be manageable for future changes.
Efficiency	Automation should reduce manual task creation and follow-up.
Traceability	Request, approval, Requested Item and Catalog Task should remain linked.

FSD-14. KNOWN ISSUES / CONSTRAINTS

- Actual test results depend on execution in the project ServiceNow instance.
- Actual screenshots, request numbers and task numbers must be captured by the project team.
- Core scope does not assume external inventory/procurement integration.
- Changes to ServiceNow catalog or workflow configuration may require maintenance.

FSD-15. FUTURE ENHANCEMENTS

- Email/ServiceNow notifications.
- Inventory and asset integration.
- SLA monitoring and escalation.
- Procurement status dashboard.
- Extension to additional standard hardware catalog items.
- Reporting and analytics.

FSD-16. APPROVAL / SIGN-OFF
